

DeoDap Care Panel

Email Automation — Complete URL Reference & Architecture

This document lists every URL used by the project — what each one is for and how it works. The application is a Django + DRF backend with a React single-page front-end, deployed on AWS EC2 behind Nginx, and mounted at the sub-path **/email_automation** on the domain **care.deodap.info**.

1. How the system is wired (request flow)

Server: AWS EC2 instance i-0428b33287c0a80a2, current public IP **3.108.50.185** (previously 43.204.203.9). **Domain:** care.deodap.info (HTTPS, Let's Encrypt).

Component	Role	Where configured
Browser / Customer / Agent	hits https://care.deodap.info/...	
Nginx (443, SSL)	terminates TLS and reverse-proxies by path	config: /etc/nginx/sites-available/care.deodap.info
Gunicorn :8013	runs the Django app (this project)	systemd unit: deodap-care.service
FastAPI :8000	Gallabox order-selection service	systemd unit: gallabox-api.service
Django :8001	category classifier API	systemd unit: category-api.service
Cron (fetch_emails */5, sweep_waiting */30)	polls Gmail (IMAP), classifies, auto-replies	crontab -l (ubuntu)

Django is mounted under a sub-path via `FORCE_SCRIPT_NAME=/email_automation`. Nginx strips the `/email_automation` prefix when proxying to Gunicorn, and Django re-adds it when it builds links. The React SPA is served as static files by Nginx from `Web/frontend/dist/`.

2. Public URLs (what a browser opens)

URL / Path	Purpose	How it works / served by
https://care.deodap.info/email_automation/	Care Panel dashboard (agents log in, manage tickets)	React SPA static files from <code>Web/frontend/dist</code> (Nginx)
https://care.deodap.info/email_automation/api/	REST API used by the dashboard SPA	Nginx -> Gunicorn 127.0.0.1:8013 (Django DRF)
https://care.deodap.info/email_automation/admin/	Django admin site	Nginx -> Gunicorn :8013
https://care.deodap.info/email_automation/static/	CSS/JS/static assets for admin & app	Nginx alias -> <code>Web/backend/staticfiles/</code>
https://care.deodap.info/email_automation/t?id=<hash>	Public customer ticket-tracking portal (no login) — the link put in customer emails	Nginx -> Gunicorn :8013 (Django view <code>tracking_page</code>)
https://care.deodap.info/email_automation/t/file	Scoped attachment/media download for the portal	Nginx -> :8013 (<code>tracking_file</code>)
https://care.deodap.info/email_automation/t/conversation	JSON conversation feed for the Care Panel 'Conversation' tab	Nginx -> :8013 (<code>conversation_json</code>)
https://care.deodap.info/api/external/...	Gallabox order-selection API (separate service)	Nginx -> FastAPI 127.0.0.1:8000
https://care.deodap.info/category/	Category classifier API (separate service)	Nginx -> Django 127.0.0.1:8001

3. REST API endpoints (under /email_automation/api/)

All of the following are relative to `https://care.deodap.info/email_automation/api/` (the alias `/api/v1/` works identically). Served by Gunicorn :8013. The SPA authenticates with a token from the auth endpoints.

Authentication

Endpoint	Purpose	Handler
POST auth/login/ · auth/token/	Agent login → returns auth token	DRF token/login view
POST auth/guest/	Guest (read-limited) login	guest_login view
POST auth/logout/	Invalidate session/token	logout_view
GET auth/me/	Current user profile & permissions	me view

Resource collections (list / create / retrieve / update / delete)

Endpoint	Purpose	Handler
tickets/	Support tickets (the core object)	TicketViewSet
messages/	Inbound & outbound emails on a ticket	MessageViewSet
pending/	Held conversations awaiting evidence / verification	PendingConversationViewSet
escalations/	Escalated / manual-review queue	EscalationViewSet
compose-emails/	Gmail-style Compose / drafts	ComposedEmailViewSet
internal-emails/	Internal (team) email records	InternalEmailViewSet
audit-log/	System audit trail per ticket	AuditLogEntryViewSet
categories/ · sub-topics/	Classification taxonomy	Category / SubTopic ViewSets
rules/ · templates/	Decision rules & reply templates	Rule / Template ViewSets
settings/	Per-brand settings (AI keys, toggles)	BrandSettingsViewSet
block-list/ · support-emails/	Blocked senders & own support addresses	BlockList / SupportEmail ViewSets
organizations/ · brands/ · mailboxes/	Tenancy: org → brand → mailbox	Organization / Brand / Mailbox ViewSets
users/	Agent accounts	UserViewSet
attachments/<id>/	Download a stored attachment	attachment_file view

Gmail / webhooks

Endpoint	Purpose	Handler
POST gmail/webhook	Gmail push notification receiver	gmail_webhook
POST care-panel/webhook	Inbound events from the external Care Panel	care_panel_webhook
gmail/connect/ · gmail/callback/	Gmail OAuth connect flow	gmail_connect / gmail_callback
gmail/fetch/	Manual 'fetch now' trigger	gmail_fetch

Analytics (manager dashboard)

Endpoint	Purpose	Handler
analytics/overview/ · volume/ · sla/	KPIs, ticket volume, SLA metrics	analytics views
analytics/ai-accuracy/ · agents/	AI classification accuracy, per-agent stats	analytics views
analytics/dashboard/ · employee-performance/	Manager dashboard & employee performance	analytics views

Endpoint	Purpose	Handler
analytics/manual-replies/ · auto-replies/	Manual vs automated reply reports	analytics views
analytics/login-history/ · internal-metrics/	Login audit & internal metrics	analytics views

4. Django root routes (URLconf)

Path (after /email_automation)	Purpose	Handler
/	Health/index JSON ({service, status, endpoints})	root view
/admin/	Django admin	admin.site.urls
/api/ · /api/v1/	REST API (see section 3)	deodap_care.api
/api/auth/	DRF browsable-API login	rest_framework.urls
/t · /t/file · /t/conversation	Public tracking portal (see section 2)	apps.tickets.tracking

Note: because of FORCE_SCRIPT_NAME=/email_automation, the public URL for each path above is prefixed with /email_automation (e.g. /t → /email_automation/t).

5. Internal service binds (localhost, behind Nginx)

Bind address	Service	Managed by
http://127.0.0.1:8013	This Django app (Email Automation)	systemd deodap-care.service (Gunicorn, 3 workers)
http://127.0.0.1:8000	Gallabox order-selection FastAPI	systemd gallabox-api.service
http://127.0.0.1:8001	Category classifier (Django)	systemd category-api.service

6. External / outbound integrations (the app calls these)

External URL / host	Purpose	Configured by (.env)
imap.gmail.com:993 (SSL)	Fetch incoming support emails	cron fetch_emails every 5 min (IMAP_HOST)
smtp.gmail.com:465 (SSL)	Send auto-replies & agent replies	smtp_client (SMTP_HOST)
deodap3.myshopify.com (Admin API v2024-10)	Verify orders/customers, fetch tracking	SHOPIFY_SHOP / SHOPIFY_TOKEN
https://care.deodap.in/api/gallabox/ticket/store-json	CREATE the ticket in the external Care Panel (phone-keyed)	CARE_PANEL_STORE_URL
https://care.deodap.info/api/external/care-panel/open-tickets	Match an incoming email to an existing open ticket	CARE_PANEL_API_URL
https://care.deodap.info/api/external/shipping/shipment-flow	Shipment / tracking lookup flow	CARE_PANEL_SHIPMENT_URL / SHIPPING_BASE_URL
https://care.deodap.in/t?id=<hash>	Customer tracking link returned by store-json (external Care Panel page)	TRACKING_PAGE_BASE
https://ship.deodap.in/tracking/<awb>	Customer-facing courier tracking link put in emails	SHIPPING_TRACKING_URL_BASE
Gemini (gemini-2.5-flash) / Groq / OpenAI	AI classification of incoming emails	GEMINI_API_KEY / GROQ_API_KEY / OPENAI_API_KEY
https://care.deodap.info/email_automation	Base for building internal /t tracking links	PUBLIC_BASE_URL

7. Operations quick-reference

Task	Command / location	Notes
Restart the app	sudo systemctl restart deodap-care	
View app logs	sudo journalctl -u deodap-care -f	
Email fetch log	tail -f /home/ubuntu/care-fetch.log	cron */5 min
Sweep/auto-close log	tail -f /home/ubuntu/care-sweep.log	cron */30 min
Nginx config test / reload	sudo nginx -t && sudo systemctl reload nginx	
Backend code	/var/www/Email_Automation/Web/backend	git: mayurkhaniyadeodap-cyber/email_automation_project
Environment file	/var/www/Email_Automation/Web/backend/.env	secrets & endpoints
SSL certificate	/etc/letsencrypt/live/care.deodap.info/	auto-renew via certbot

Generated for the DeoDap Care Panel migration. Public access requires the DNS A record **care.deodap.info** → **3.108.50.185** (an Elastic IP is recommended so it never changes).
